

# Sustainable Growth

## DNP is committed to sustainable growth.

DNP is actively working to preserve the environment. Corporately, we strive to achieve zero emissions, reduce water usage, protect biodiversity, thoroughly control use of VOS and other chemicals, develop eco-friendly products, and pursue green purchasing.

Today in Mount Pleasant, Pennsylvania:

- We are operating below our energy consumption target.
- We recover and reuse 80% of the solvent needed to manufacture our TTR.
- DNP thermal transfer ribbons are wound on cores made from 55% recycled material.
- Our formulations are compliant with:
  - REACH (European Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals to protect health and the environment)
  - RoHS (Restriction of Hazardous Substances)
  - FDA (for indirect food contact)
- Our formulations are free of:
  - Latex
  - BPA
  - Asbestos
  - Conflict minerals
  - Heavy metals
- We carry a full line of halogen-free products.
- Our product packaging is made of 45% recycled material.
- Many of our products are UL and cUL recognized—both U.S. and Canadian standards.

Additionally, used DNP ribbons are being recycled and converted into alternative fuel. Organizations like Convergen Energy and Pellet America convert non-recyclables like substrates and TTR into fuel pellets that can be used as alternative energy. Many paper, printing, converting, and label companies and DNP partners utilize these services.
